HYDRAULIC MACHINE -

①

1) Impact of jets (Dynamic action of fluid)

ESE obj - 6 ^{marks} Q obj

ESE conv. - 20-40

GATE - 2-4 marks

Turbine - It converts hydraulic power or water power into mechanical power.

Introduction -

* Turbine : It converts hydraulic power or water power into mechanical power.

* Pump - It converts Mechanical Power to Hydraulic Power.

Impact Of Jet - (Dynamic Action of fluid)

(2)

FORCE CONCEPT -

Impulse - suddenly applied force
By application of force the momentum will be change
Ex- slap in
• check.

(1) Impulse Momentum Theorem :

Impulse = Change in momentum.

$$\boxed{F \cdot dt = mV_2 - mV_1} \quad \text{--- (1)}$$

In case of water we have to consider.

$$\text{Mass of flow rate } \left(\frac{dM}{dt} = \dot{M} \right) = \rho Q \text{ (kg/s)}$$

By differentiating equation (1),

$$F = \frac{d}{dt} (mV_2 - mV_1)$$

$$= \frac{d}{dt} mV_2 - \frac{d}{dt} mV_1$$

$$= \frac{dM}{dt} \cdot V_2 - \frac{dM}{dt} \cdot V_1$$

$$\boxed{F = \dot{M}V_2 - \dot{M}V_1}$$

force equal to rate of change of Momentum.

$$F_{(\text{external / Vanes / Blades})} = \dot{m}v_2 - \dot{m}v_1$$

$$F_{\text{water jet}} = -F_{\text{vane}}$$

$$= -(\dot{m}v_2 - \dot{m}v_1)$$

$$F_{\text{jet}} = \dot{m}v_1 - \dot{m}v_2$$

Energy CONCEPT -

Energy (solid body)	Energy / sec (Power)	(Power or work done / sec) mg (Head)
$\frac{1}{2}mv^2$ (KE)	$\frac{1}{2}\dot{m}v^2$	$\frac{\frac{1}{2}\dot{m}v^2}{\dot{m}g} = \frac{v^2}{2g}$
mgh (PE)	$\dot{m}gh$	$\frac{\dot{m}gh}{\dot{m}g} = h$
$F \cdot x$ (WD)	$F \cdot v$	$\frac{F \cdot v}{\dot{m}g}$

$v \rightarrow$ velocity of body jisme force lagega
